How to save water and $$

1. Check faucets and pipes for leaks
2. Use your water meter to check for hidden leaks
3. Water your lawn only when it needs it
4. Insulate water pipes (this easy and inexpensive way will get hot water faster and you will waste less as you won’t have to wait so long)
5. Install water saving shower heads and low flow faucet aerators
6. Take shorter showers
7. Turn off the water after you have wetted your toothbrush (don’t leave it running!)
8. Rinse your razor in the sink instead of running the water
9. Use your dishwasher and washing machine only when you have full loads
10. Bathroom rule: If it’s yellow, let it mellow. If it’s brown, flush it down!
